VARSHINI JANAKI K

B.Tech Information Technology | KGISL Institute of Technology | 2023–2027

THREE-YEAR JOURNEY

Over the past three years, I have developed from an IT student with a strong interest in programming into an aspiring AI/ML and Full-Stack Developer. My learning has combined software development, machine learning, generative AI, data processing, and practical problem-solving through internships, projects, hackathons, and self-driven development. I have worked with Python, Java, web technologies, databases, computer vision, NLP, and AI-agent workflows while continuously building and deploying hands-on projects.

INTERNSHIPS & PROFESSIONAL EXPOSURE

CodSoft	Artificial Intelligence Intern — completed task-based AI projects and strengthened practical skills in Python, machine learning and Git/GitHub.
Elevate Labs	AI & ML Intern — worked on machine-learning tasks in Google Colab and completed the internship with recognition for performance.
Microsoft AI Professional Program	Built knowledge across modern AI concepts and practical generative-AI workflows.

KEY PROJECTS

- **AI Hallucination & Citation Verification System** — AI-agent based system that extracts claims and citations, retrieves supporting evidence, checks references using sources such as Crossref and Semantic Scholar, and uses LLM/NLI-based reasoning to identify potentially unsupported or hallucinated claims.
- **AI-Powered Auditing & Finance Tracing System (FinTra)** — Web-based finance auditing solution developed with Flask, SQLite, HTML/CSS/JavaScript and AI-oriented analysis concepts to organize financial records and support tracing and auditing workflows.
- **AI-Powered Mental Health Chatbot with Emotion Detection** — Streamlit application combining NLP and speech-emotion analysis. Worked with the RAVDESS dataset and a text-emotion dataset, with trained models saved for text and voice emotion inference.
- **YOLO Sidewalk Accessibility Checker** — Computer-vision project using YOLO and OpenCV to detect sidewalk-related objects and accessibility obstacles, with dataset preparation and model training using real-world visual data.
- **Smart Hospital Workflow & Queue Optimization** — Built an end-to-end hospital navigation and workflow solution during Tech for Good 2026, focusing on improving patient movement, queue handling and operational efficiency.

ACHIEVEMENTS & DEVELOPMENT

- Participated in inter-college hackathons and collaborative technology events, including Tech for Good 2026 and AI-focused competitions.
- Worked on an AI Negotiator Showdown project using persona-based AI agents and LLaMA-3-8B concepts.
- Contributed to open-source work, maintained GitHub repositories, and practiced structured coding/problem solving.
- Continuously developed skills in AI/ML, Generative AI, AI Agents, Full-Stack Development, computer vision and data engineering.

TECHNICAL FOUNDATION

Programming: Python, Java, C, C++, SQL **Web:** HTML, CSS, JavaScript, React.js, Node.js, Express.js, Flask, FastAPI **AI/ML:** Machine Learning, Deep Learning, NLP, Generative AI, AI Agents, YOLO, OpenCV **Data/Tools:** MongoDB, SQLite, Git, GitHub, Streamlit, REST APIs

CAREER DIRECTION

I am currently focused on building a career in AI/ML and software engineering, with a particular interest in Generative AI, AI agents, computer vision, data-driven systems, and full-stack applications. My goal is to apply these skills to real-world products while continuing to strengthen my engineering fundamentals.
